Working in Cybersecurity

What the heck is Cybersecurity? 🤔

When people ask me what I do, it's honestly hard to explain quickly enough before their eyes roll back into their head.

There's a ton of areas in cyber you can work in, and more are added every year.

> I work in risk management & compliance management, two areas that are honestly critical to every organization startup or not, but are definitely not prioritized by startups cause of, you know, *getting money in the door*.

I am the co-founder of [Sakra](https://getsakra.com), (Pronounced Sock-rah) which started out as a consulting service, but then pivoted into product. Making it ridiculously easy for early stage startups to get ready for their SOC 2 audit. I recently exited Sakra and handed over the reins to my co-founder, so Sakra is in great hands.

I'll break down the areas of cybersecurity later. Maybe after lunch.
Tata for now.
